

Ideation Template report

Introduction:

The website which I want to design for this project is a personal website or a website that most describes me. I want to have a personal website because of my love towards web design and it would be the awesome first step to have a website for me

The goals of this project is to convey the person who visits my website the most about me like the projects I have done, my hobbies, my passion, and links to some social media if they want to contact me after seeing my work

Expected List of Features:

1)A simple yet an attractive landing page

As people say First impression is the best impression my website should have an attractive landing page from which the user who visits the webpage should know my tastes.

2)Portfolio

my website should feature a portfolio which will have all the projects or the work I have done and brief description of the projects

3)About section

A section in a webpage that describes me or which talks about me so that the user who visit the site know me better as a person

Market survey

There are many people who have their own websites. Some of the best websites I have found till now are

1)<https://www.devonstank.com/>

2)<http://www.garysheng.com/>

3)<https://thalida.com/>

4)<http://nik.org/>

5)<http://www.sarahlichang.com/>

All the features mentioned above are put in creative ways they don't change but everyone has their own way of creatively representing them.
